

# Growing your bean

## Instructions

- Make sure your name is on the pot.
- Fill the pot up half way with soil.
- Push the seed into the soil – about half way down and cover over with soil.
- Put a small drop of water in.
- Place somewhere warm and sunny. A window sill is a good place.
- Check the bean once a day and only water when the soil is very dry (touch to see if you are not sure).
- As the bean gets taller it will need some support. Put a stick in and tie loosely to the bean with string.
